The maps below show how Asian and white populations in the City of Oakland are dispersed. For each census block, the white population of the block is divided by the Asian population. In the map to the left, these ratios are split into 5 different classification groups while in the map to the right they are split into 10 groups.

Asian populations tend to be more concentrated in areas that are blue in the map to the left and in areas that are white in the map to the right. This means that they tend to be concentrated more in East and West Oakland, especially near Lake Merritt and Chinatown and near the Oakland Airport. White populations, meanwhile, tend to be more concentrated in wealthier neighbourhoods such as the Oakland Hills and Rockridge.
